The Moon goes through a cycle of eight distinct phases as it orbits Earth, each offering a unique view of its illuminated surface.

There are eight phases of the lunar cycle. If you've ever looked up at night and not seen the moon, it might be due to the fact that we're in the new moon phase.

The eight main moon phases, in order, are: new moon, waxing crescent, first quarter, waxing gibbous, full moon, waning gibbous, last (third) quarter, and waning crescent.

Use our Moon Phase Calendar to find dates and times of the full Moon, new Moon, and every phase in between. Beyond the phases of the Moon, you will also see daily Moon illumination ...

Moon Phase for today and tonight with current lunar phase, illumination percentage and Moons age. Find out what the Moon Phase is on any other day of the year.

Find the Moon's illumination, distance, and latitude for any time on any date. The Moon has four primary and four intermediate lunar phases during a lunar month. Here's all you need to know about each ...

Sometimes the Moon seems to disappear. These shifts are called Moon phases. The eight lunar phases are, in order: new Moon, waxing crescent, first quarter, waxing gibbous, full Moon, ...

As the moon orbits Earth, we on Earth's surface see varying fractions of its lighted face, or day side. These are the changing phases of the moon. Four tips to understanding moon phases, here.

Explore the Moon Calendar: track the Moon phases, learn about lunar events, and check what the Moon will look like in the sky tonight. Perfect for astronomers and stargazers!

Today's lunar phases, including the moon age and details such as moonrise and moonset. Discover when the

1000w solar light lighting effect

moon will reach the full moon phase with a countdown timer.
