This page provides an overview of 5G measurements performed on User Equipment (UE) and Base Stations (BS) or Nodes B (NB). It details both 5G UE measurements and 5G BS measurements.

The present document covers the assessment of NR and NR with NB-IoT in-band operation Base Station (BS) and ancillary equipment in respect of Electromagnetic Compatibility (EMC).

For the fifth generation (5G) networks, a standardized approach for extrapolating EMF values is yet to be defined. This work provides an overview of the state-of-the-art research that focuses on estimating ...

This paper discusses 5G NR Release 16 base station transmitter conformance testing requirements and the specific challenges that arise in millimeter wave (mmWave) frequency testing.

The 3GPP RAN4 group has published the EMC specification TS 38.113 [1] for 5G NR base station, which is the first public published 5G base station EMC specification all over the world.

Introduction  
Calibrated mmWave Modulated Signals: Cabled Source to Receiver  
Calibrated mmWave Modulated Signals: Radiated Source to Receiver  
Antenna Metrology for Smart Antennas and MIMO Systems  
Measurement Uncertainties  
Conclusion  
Future "5G and beyond" wireless systems will present new and challenging EMC problems. Fundamental microwave and field metrology will be needed to develop accurate and meaningful EMC test methods and standards. This paper has presented some ideas on the metrology needs and the NIST plans to address them. But so much that will define the interfere...

Accurately assessing EMF exposure from 5G - Ericsson  
This white paper provides information related to human exposure to radio frequency electromagnetic fields (RF EMF) from the base stations in the new 5G networks and describes how to accurately ...

Performance of three different methodologies and equipment (broadband probes, spectrum analyzers, and drive test scanners), in the context of human exposure to electromagnetic ...

# 5g base station electromagnetic battery testing national standard

Study on measurement and evaluation of electromagnetic environment of 5G base station. Results show compliance with national standards and minimal impact on health.
