Is it possible? In this video, we're going to experiment with upcycling a fan motor to create a functional wind turbine generator...more

y air conditioner the AC generator can generate voltage 35 V, current 0.51 A and output power 14.28 W While the DC generator can generate 46 V, current 0.32 A and output power 14.72 W with adopting 3 ...

A study reveals HVAC systems can generate clean energy using ...

For decades, in millions of homes, the wind energy coming off of those outdoor fans has been languishing in backyards as wasted potential -- ...

Innovative wind turbine uses wind generated by air conditioning to produce electricity. Learn how this technology can revolutionize energy consumption in urban and residential environments!

Vertical-axis wind turbines built with specially designed forward-backward-swept blades effectively capture this wind and use it to generate ...

The invention includes the method of generating electricity from air conditioning exhaust by holding a wind turbine in a relatively fixed proximity to an air conditioning exhaust...

Could this possibly work?

This report presents the design and testing of an exhaust air energy recovery wind turbine generator in order to propose a new system on clean energy generation.

Nope. That will create additional resistance requiring additional power from the motor. The yield of the fan tip "generator" would be notably less than the additional power consumed by the ...
