In 2011, we developed the industry's first 2.3mm thick pre-coated magnesium-aluminum-zinc coated steel coil, "Crystal Diamond," which can be used for solar bracket forming.

Zinc-magnesium-aluminum (Zn-Mg-Al) is a high-performance alloy coating technology that integrates zinc (Zn), magnesium (Mg), and aluminum (Al) in precise proportions (typically 1.5-3% ...

Currently, Art Sign has widely adopted Zinc-Aluminum-Magnesium alloy as the raw material for solar mounting structures. It is widely used in flat ...

Zinc-aluminum-magnesium coating in the air will have a chemical reaction to form magnesium carbonate, the substance has a buffering effect on the PH value, reducing the dissolution ...

At Wanhos, we use zinc-aluminum-magnesium coatings because they help deliver mounting systems that are durable, easy to install, and require minimal maintenance.

While aluminum zinc magnesium (AZM) coatings aren't exactly new kids on the block, they're causing quite a stir in the solar industry. Let's cut through the jargon and see what's really going on.

Primary Composition: The base material is typically steel plate coated with a ternary alloy layer of zinc, aluminum, and magnesium. Although termed "zinc-aluminum-magnesium supports," ...

ZAM Solar Bracket The ZAM solar bracket is made from galvanized steel coated with a molten alloy of zinc and aluminum (ZAM[®]), providing exceptional resistance to rust, corrosion, and environmental ...

Zinc-Al-Mg plates stand out in harsh environmental conditions. The zinc-aluminum alloy coating offers high resistance to corrosion, even in damp and saline environments.
