A modern wind turbine anywhere produces electricity 70-85% of the time, with the outputs varying depending on the wind speed, according to the Canadian Wind ...

To further expand wind energy's capabilities and community benefits, researchers are working to address technical and socio-economic challenges in support of a ...

Wind turbine phobia, or anemomenophobia, is an unreasonable dread of wind turbines. It is often the result of psychological trauma caused by a ...

Ancaophobia is never present at birth. The fear of wind most often arises as a result of a negative experience in the person's past. This experience may or may not be recalled in the conscious mind of the person but this has been imprinted on the subconscious mind. Most often an ancaophobic person experienced a situation where the wind was blowing heavily and they found themselves afraid that the wind might destroy or kill them. This experience becomes linked with the wind, and is known as a "gen...

At large scale, slowing down the wind by using its energy to turn turbines has environmental consequences. A group of researchers at Princeton University found that wind farms ...

Simply put, wind turbines don't produce energy when the wind doesn't blow. For example, during the summer and early fall of 2021, Europe ...

Wind power forms a crucial part of the transition to renewable energy. But it faces fierce criticism from some parts of society. Is it justified?
