---

Private forest land has been broken into smaller and smaller parcels in the Mid-Atlantic over the last several centuries. ...

An innovative solution is gaining momentum across environmental and energy sectors: strategically placing solar energy installations on deforested and ...

This study conducts a cost-benefit analysis of replacing forest land with a large-scale solar (LSS) photovoltaic (PV) facility, using data from a proposed 9.35 MW DC project in the ...

Harvard Forest researchers have co-authored a report detailing how many projects have required the clearing of carbon-absorbing forested areas, unnecessarily harming nature as well as undercutting ...

When land is scarce, bodies of water near wooded areas can serve as installation sites, minimizing land use and ecological impact. Each technology brings distinct opportunities and challenges.

The aim of this study was to explore the operational potential of forest-photovoltaic by simulating solar tree installation. The forest-photovoltaic concept is to maintain carbon absorption activities in the ...

As the authors make clear, clean energy sources aren't enough to meet climate goals. Removing carbon from the atmosphere is just as important, and Massachusetts' famously abundant ...

A new study reveals how solar farms impact forests and farmland--but they don't have to. Learn how we can expand solar energy while ...
