What Are "Clean Energy Bases"? The Scale Provincial Ambitions Rethinking The Role of Coal Power Will The Expansion Be Enough to Deliver Peak Emissions? Methodology The concept of "clean energy bases" was first introduced in China's overarching 14FYP in early 2021, showing the importance of the concept - most energy sector plans are designated to the sectoral FYP. The bases are areas designated for the simultaneous construction of numerous large wind and solar parks, each a gigawatt-scale developme... See more on carbonbrief

(Yicai) Dec. 16 -- China will add more than 200 million kilowatts of new wind and photovoltaic power generation capacity next year as it accelerates the green ...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

In a landmark development for China's energy landscape, 2025 marked the first time solar power generation eclipsed wind energy. This historic transition stems from the aggressive ...

As a matter of fact, China has more wind and solar capacity than any other country in the world with twice as much capacity under construction than ...

The National Development and Reform Commission (NDRC), China's state economic planner, has published two lists of gigantic wind and ...

China's solar and wind operating capacity has soared to 1.4 TW and now accounts for 44% of the world's operating utility-scale solar and wind capacity, more than the combined total of the European ...

The nation put up 357 gigawatts of solar and wind, a 45% and 18% increase, respectively, over what was operating at the end of 2023, according to China's ...

China actually added record amounts of both wind and solar power capacity in 2025. And according to some calculations, it may even have reached peak CO2 emissions -- way ahead of its ...

China's installations of wind and solar in May are enough to generate as much electricity as Poland, as the world's second-biggest economy ...
