As the energy crisis fueled by Russia's invasion of Ukraine has subsided, demand for residential solar systems in the EU has declined and several residential solar incentive schemes ...

Each presentation focuses on global and U.S. supply and demand, module and system price, investment trends and business models, and updates ...

Dual-use applications such as agrivoltaics, floating PV, and infrastructure-integrated PV are becoming increasingly relevant, helping balance land use, food ...

While our commercial and community solar outlooks have risen slightly due to enhanced project pipeline visibility, we've downgraded our residential outlook as tight module availability is ...

On the good side, solar continued its run of astonishing growth, generating 35 percent more power than a year earlier and surpassing hydroelectric power for the first time.

In 2024, 17 countries, with variable renewable energy (VRE) generation exceeding 25%, introduced intended solutions to mitigate issues related to high curtailment, negative pricing, VRE unprofitability, ...

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

In this analysis, we examine the latest trends in installations, costs, and market dynamics, providing solar businesses, developers, and investors ...

Top 10 states for electricity generated from solar (utility-scale and small-scale) and wind in 2024. Find data for all 50 states and Washington, D.C. ...

In 2024, over 30,000 MW of solar capacity came online, which is a 30% increase in operating solar capacity.

Civilian solar power generation trends

An additional 34,000 MW are under preparation, testing, or construction and projected to ...
