However, the integration of different distributed generations has complicated the control of bus voltage and current. Therefore, several efforts have been made in the research community to ...

The goal is to maintain a constant DC-link voltage while balancing demand and supply. The study establishes a hybrid control approach for a DC microgrid involving PV, BESS, and DC ...

In this paper, a faster model predictive optimization algorithm is introduced as a primary control method to predict operational states in advance, ...

A comparative analysis of the most significant robust control schemes applied to hybrid AC/DC microgrids with different topologies and grid-connection modes is presented, highlighting their ...

In our study, we are focusing on a hybrid AC/DC MG connected to a main AC grid, and using WTs based on a doubly fed induction generator (DFIG), PV panels, AC and DC loads as well ...

Key features of the proposed algorithm: Controls the power flow through the interfacing converter between the AC and DC subgrids.

This article introduces a robust passivity-based control (PBC) approach aimed at reducing instability issues, while considering the dynamic ...

Deep learning techniques have been widely adopted in resilient control for distributed microgrid (MG). However, in practical implementations, due to data privacy concerns and limited ...

AC/DC converter regulates the voltage and frequency of the AC bus. Subgrids of alternating current and direct current may be balanced using battery nodes. Model and architecture for AC/DC microgrid ...

The current trends and developments in local and global control strategies for DGs and power converters in

DC hybrid microgrid control method

hybrid microgrids are focused on addressing the complexities of a hybrid AC/DC ...
