Char U+2393, Encodings, HTML Entitys:?, ?, UTF-8 (hex), UTF-16 (hex), UTF-32 (hex)

The character ? (DIRECT CURRENT SYMBOL FORM TWO) is represented by the Unicode codepoint U+2393. It is encoded in the Miscellaneous Technical block, which belongs to the ...

This symbol which can be represented with Unicode character U+ 2393 (? , "Direct Current Symbol Form Two") is found on many electronic devices that either require or produce direct ...

Electric Current Symbols. The electrical currents are movements of electrons through a conductor.

The symbol solid line represents a graphical plot of the output voltage with the dashed line representing the 0 V reference. Since the ...

? (Direct Current Symbol Form Two, U + 2393) is the widely recognized graphical symbol for direct current (DC), a steady, unidirectional flow of electric charge.

Direct current symbol

In electronics, direct current (DC) circuits are represented with standard symbols to clearly understand the code of electricity universally. ...

Direct current (DC) is a type of electric current that flows in only one direction. The symbol for DC is a horizontal straight line with a ...
