-----

gas-turbine engine, any internal- combustion engine employing a ...

A gas turbine is a rotary engine that converts the thermal energy of burning fuel into mechanical energy through the expansion of hot gases. It is ...

A gas turbine is a type of IC engine that uses compressed gas to generate mechanical power. This mechanical power is further used to run a gas generator ...

A gas turbine is a combustion engine at the heart of a power plant that can convert natural gas or other liquid fuels to mechanical energy. This energy then drives a ...

A gas turbine is a motor that, from a fuel (a gas, normally natural gas) generates mechanical energy. The energy produced can be transformed ...

The meaning of GAS TURBINE is an internal combustion engine in which expanding gases from the combustion chamber drive the blades of a turbine.

In a gas turbine, the turbine is the component that extracts energy from the hot, high-pressure gases generated by the combustion process. The gases flow ...

Gas engines are internal combustion engines that burn fuel within the engine itself, while gas turbines use external combustion where air and fuel are mixed and ...
