---

Using the geometry and optical properties of a giant see-through ball, this solution acts like a giant magnifying glass to make power. According to their claim, it can reach efficiency level of...

Rawlemon Solar Architecture -- a Barcelona-based startup -- has plans to change the solar game forever with a spherical glass solar energy ...

A theoretical model of a hybrid power generation device consisting of a low concentrated photovoltaic (CPV) module and a thermoelectric generator (TEG) is established in this paper.

The glass sphere is used to concentrate diffused sunlight into a small surface of tiny solar panels. The ball lens is able to concentrate and diffuse light on one small focal point, which means less material ...

Discover how Rawlemon, with solar spheres, improves photovoltaic efficiency by up to 70%, capturing energy even on cloudy days and at night.

Unlike conventional flat solar cells, Sphelar's cell takes on a spherical shape, which makes it capable of power generation with greater efficiency. This tiny solar cell, ...

Solar energy collection has had some vast improvements over the last few years; however these new prototypes from German-born, Barcelona-based architect Andr s Broessel are quite striking since his ...

The company claims these spheres could achieve 60 times more energy output than solar panels in natural or artificial light.

After years of dedicated research, his team successfully overcame a series of challenges, including high-efficiency tellurium purification, preparation ...
