---

Covert communication can realize the transmission of hidden information between both sides of communication to a certain extent, which makes the transmission content and transmission ...

HAPS technology offers a new platform for providing mobile broadband access with minimal infrastructure using the same frequencies and user ...

The student will be introduced to High-Altitude Platforms (HAPS) for wireless communications. This overview will include the key design ...

Micro-grid OASIS L241 can form a microgrid system with inverters, photovoltaic arrays, loads, diesel generators, etc. which is widely used in remote mountain areas, areas ...

High-altitude platform station (HAPS) systems can potentially be used to provide both fixed broadband connectivity for end users and transmission links between the mobile and core ...

HIBS are intended to be used as a part of, and complement to, terrestrial IMT networks, using the same frequency bands as ground ...

In this paper, HIBS is examined from the context of its integration with 5G new radio (NR) as a non-terrestrial network asset. The challenge of HIBS meeting the stringent ...

HIBSs might efficiently support reducing the digital divide, since they provide connectivity to the same mobile devices as the terrestrial networks, which allows this non-terrestrial connectivity ...

This document describes the special characteristics of mounting locations above 2,000 m MSL (Mean Sea Level) and the effects on the design of central inverters of the CP XT production ...
