This is a list of electricity-generating power stations in the U.S. state of Georgia, sorted by type and name. In 2023, Georgia had a total summer capacity of 37,786 MW through all of its power plants, and a net generation of 129,221 GWh. In 2024, the electrical energy generation mix was 41.2% natural gas, 34% nuclear, 12.7% coal, 6.6% solar, 3.7% biomass, 1.6% hydroelectric, 0.2% petroleum, and less than 0.1% ...

This map shows solar plants, transmission lines, and solar potential within the United States. The map also contains information about days over 100 degrees, and if a solar site falls within ...

Here is a map of all utility-scale solar farms in Georgia. Hover over a solar farm to view information on each project like their name, capacity and construction date.

The United States Large-Scale Solar Photovoltaic Database (USPVDB) provides the locations and array boundaries of U.S. photovoltaic (PV) facilities with capacity of 1 megawatt or more. It includes ...

About 500 MW of BESS is currently approved for location siting in the state and not yet in service. In addition to seeking DER resources, Georgia Power created three crediting system programs. ...

With over 600 operational data centers, many corporations mitigate the impact on the grid through solar and storage. Nevada generates nearly one-third of its electricity from solar, benefiting from abundant ...

We have constructed and are operating 16 solar farms and additional demo facilities across the state of Georgia, many in partnership with military installations.

Georgia Power has a solar purchase program, SP-1, for up to 100 kW systems which pays 17¢/kWh. A second meter is installed for the solar generation, all of which is purchased by Georgia Power. The ...
