In this study, we update the assessment of cost projections, comparing over 40 studies and 150 scenarios, between 2020 and 2050 of the main renewable energy technologies: utility-scale ...

The study includes technologies with significant historical and recent additions (combined cycle, wind, solar), as well as technologies with few installations (nuclear, carbon capture and storage).

This module provides current and forecasted capital costs of wind, solar and battery storage resources and the operational considerations associated with these resources in the context of a supply mix ...

Utility-scale solar and wind power are now the lowest-cost sources of additional clean generation in many regions, with cost projections driving ...

The decision to invest in a particular power generation technology should carefully consider both the initial capital costs and the long-term ...

To accurately reflect the changing cost of new electric power generators in the Annual Energy Outlook 2025 (AEO2025), EIA commissioned Sargent & Lundy (S&L) to evaluate the overnight capital cost ...

In this work, we compile and standardise a broad dataset from over 110 existing regional and global studies to provide an organised and spatio-temporally granular dataset of cost projections ...

The dashboard is a free resource that provides data on the cost of capital focused on clean energy projects in emerging and developing economies. It also provides information of the main underlying ...

In 2024, renewables helped avoid USD 467 billion in fossil fuel costs, reinforcing their role in enhancing energy security, economic resilience, and long-term affordability.

Investment costs of wind solar and battery power stations

Comprehensive 2025 guide to renewable energy costs. Compare solar, wind, and clean energy pricing vs fossil fuels. Includes latest LCOE data, trends, and projections.
