Two-component polyurethane coatings are designed to help ...

Protective coatings and leading-edge protection systems are required after structural work to prevent future erosion. PPE, ventilation, and safe handling procedures are mandatory for all ...

Helps protect blade surfaces from power-robbing damaged caused by minor impacts, rain, sleet, sand, dirt, or other debris. Excellent UV resistance for long-term reliability.

Helps protect blade surfaces from power-robbing damage caused by minor impacts, rain, sleet, sand, dirt, or other debris. Excellent UV resistance for long-term reliability. Get the most out of your wind ...

In the sector of wind energy, safety is not an option but an obligation. Wind turbines are extremely complex structures usually placed in ...

In cold and humid regions, wind turbines face a hidden but serious challenge: blade icing. Ice accumulation on turbine blades can cause ...

That represents a huge market for wind farm developers and manufacturers alike, and there are several technologies coming to the market which integrate anti-icing or de-icing properties into blades to ...

Discover critical safety protocols for wind turbine blade maintenance in renewable energy services.

This method uses electro-thermal heating elements, which are embedded inside the rotor blade or laminated in the blade surface layer. This ...
