About 4,100 openings for solar photovoltaic installers are projected each year, on average, over the decade. Many of those openings are expected ...

These projects focus on concepts that could achieve commercial success in the short term or as long as 10-20 years. This creates an innovation ecosystem in the United States, supporting the long-term ...

The continued growth of the distributed solar market has prompted electric utilities, regulators, and others to consider improvements to the ...

Today, solar energy powers millions of U.S. homes and businesses, providing about 4 percent of the nation's utility-scale electricity.

Over the last 15 years, solar photovoltaics (PV) has developed from a niche electricity generation technology to the most rapidly expanding renewable ...

The Major Solar Projects List is a database of all ground-mounted solar projects, 1 MW and above, that are either operating, under construction or under development. The list is for ...

NLR's solar energy research includes next-generation solar technologies for national security applications and emerging industries as well as photovoltaic performance, reliability, and ...

In the United States, most PV systems are large, utility-scale systems that use single-axis trackers and central inverters, which are not commonly examined in existing life cycle assessment (LCA) literature.

Lawrence Berkeley National Laboratory compiled and synthesized empirical data on the U.S. utility-scale solar sector.
