Solar power includes solar farms as well as local distributed generation, mostly on rooftops and increasingly from community solar arrays. In 2025, utility-scale ...

The US is experiencing its most transformative year for electricity generation in over 20 years, driven by a surge in solar energy and backed by ...

Solar and wind accounted for almost 96% of new US electrical generating capacity added in the first third of 2025, according to FERC data.

Solar. In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW of new ...

Discover the world's biggest operational solar farms and the mega projects set to reshape tomorrow's renewable energy landscape.

China's solar power generation overtook wind for the first time last year as a boom in cheap panels continues to reshape the country's grid and climate trajectory.

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest ...

Solar remains the third largest renewable electricity technology behind hydropower and wind -- but it accounted for just 4.5% of total global ...

The Major Solar Projects List is a database of all ground-mounted solar projects, 1 MW and above, that are either operating, under construction or under development.

Is there a major in solar power generation

Solar continues to dominate new electricity generation capacity added to the grid in the United States, according to the Energy Information ...
