US wind installations will rebound in 2025, but the concern lies in the sharply downgraded 5-year outlook. We'll give you one guess why.

Wind has advanced to become the main source of renewable power generation in the U.S., ahead of conventional hydropower. Recent years have ...

In 2019, wind power surpassed hydroelectric power as the largest renewable energy source in the U.S. In March and April of 2024, electricity generation from ...

Percentage change in wind energy generation relative to the previous year.

A report from a leading wind power trade association said a record 117 GW of new wind energy generation capacity was installed worldwide last ...

While global growth slightly slowed, the steady and inspiring rise of wind power in countries like China and Brazil gives us renewed optimism. ...

Following the record wind capacity additions of more than 14.0 GW in both 2020 and 2021, introduction of new U.S. wind facilities has slowed in the ...

Renewable energy statistics 2025 provides datasets on power-generation capacity for 2015-2024, actual power generation for 2015-2023 and renewable energy balances for over 150 countries and areas for ...

Electricity generation from wind established a new record in the United States in April, and wind generation exceeded coal-fired generation in both March and April, data from our July 2024 ...
