China's solar thermal power generation companies have mastered the core technology of building large-scale molten salt tower thermal power stations, and are ready to go global, industry experts said.

Our Lava heat engine is designed to harness a wide range of thermal energy from various industrial processes and turn it into a valuable commodity: electricity.

Solar, wind and hydro - sure, but have you heard of volcano power? With cutting-edge AI technology, and a touch of science fiction, harnessing the ...

There are many different options, available and useful at varying points of progression. So many options are available that it may be confusing to new players. This page lists many of the most ...

Below are answers to some of the most-asked questions about Repsol and the Lava Run Wind Project.

It's definitely a decent amount of power and very reliable, and you can just ignore power requirements for quite a long time. But a big enough network and you need some more.

Most people use the Mekanism Heat Generator by tossing lava or burnable fuel in... but did you know it can passively generate power just by being lava-logged? ? In this short, I break down...

The Lava Ridge Wind Project was a proposed wind energy plant to be built in the Magic Valley region of Idaho. It would have a maximum of 400 wind turbines generating a nameplate capacity of over 1000 MW, making it one of the most powerful wind farms in the United States. The project has faced opposition, in part due to turbines and infrastructure potentially being visible from the site of the former Minidoka internment camp

Lava is a climate-tech startup turning breakthrough isothermal heat-engine and heat-pump R& D into real-world megawatts. Our systems pair record thermal efficiency with factory-ready ...
