-----

Primary energy sources take many forms, including nuclear energy, fossil energy -- like oil, coal and natural gas -- and renewable sources like wind, solar, ...

Explore the list of renewable energy sources powering a cleaner, sustainable future, from solar and wind to hydropower, geothermal, and biomass. Learn how each source works, its benefits, costs, and ...

We therefore want to shift our energy systems away from fossil fuels towards low-carbon energy sources. This interactive map shows the share of primary energy ...

These energy sources harness nature's power to provide clean, sustainable electricity and reduce carbon emissions. From the warmth of the sun to the motion of ocean tides, renewable ...

Renewable energy is increasingly important as the world faces the threat of global warming. Find out more about the main ...

Sustainable energy includes solar, wind, hydroelectric, geothermal, biomass, tidal and wave power, and hydrogen fuel cells. Each type has its own benefits and is key to a clean energy ...

OverviewDefinitions and backgroundEnergy conservationSustainable energy sourcesEnergy system transformationGovernment policiesFinanceEnergy is sustainable if it "meets the needs of the present without compromising the ability of future generations to meet their own needs." Definitions of sustainable energy usually look at its effects on the environment, the economy, and society. These impacts range from greenhouse gas emissions and air pollution to energy poverty and toxic waste. Renewable energy sources such as wind, hydro, solar, and geothermal energy

We've taken a look at some of the top renewable energy sources -- solar and wind among them -- examining the pros, cons and some of the ...

## List of sustainable energy sources

Renewable energy, usable energy derived from replenishable sources such as the Sun (solar energy), wind (wind power), rivers (hydroelectric ...
