In this study, electricity usage and energy usage of households, their interest in solar energy and the obstacles they encounter in the use of solar energy are discussed.

This systematic literature review aims to bridge this gap by: (a) critically analysing the state of solar PV adoption at the household level and consolidating current research on the topic, ...

This paper made an attempt to identify the determinants of adoption of residential rooftop solar. The results of the study shows that the high upfront cost of rooftop solar is the major economic ...

The objective of this research is to identify the antecedents affecting the behavioural intentions of local housing residences in using photovoltaic (PV) solar technology in their houses.

Solar energy is a promising renewable technology to secure energy security and reduce emissions. While there are several solar energy studies, the intensified ...

Therefore, this chapter presents a systematic literature review of studies on households' intention to install solar PV systems to identify the gaps in the field of study.

To address this question, I have conducted a systematic review to examine which factors support or complicate household solar adoption. I identified 43 studies in 25 countries that describe ...

A review of applied research conducted on aspects related to the efficiency and versatility of household photovoltaic (PV) power generation systems is presented.

This article provides a comprehensive literature review of the current state of solar power generation technologies, their economic viability, and the role of energy storage technologies in ensuring the ...

Literature review of household solar power generation

This paper fills several important existing gaps in the literature. We explore how residential rooftop solar impacts EB (electric and non-electric) at the household level across the U.S.
