Dive Brief: The global market for lithium-ion batteries is expected to remain oversupplied through 2028, pushing prices downward, as lower electric vehicle production targets in the U.S. and ...

High peak hour power prices in China have emerged as the driving force behind a revival in the price of lithium, a key battery metal, which has risen ...

Without clear battery health insights, BESS owners risk lost profits, downtime, and safety issues. See how AI ensures long-term success.

A large lithium battery energy storage system operated by Key Capture Energy that can power 15,000 homes for two hours during outages or high demand is shown ...

In support of this challenge, PNNL is applying its rich history of battery research and development to provide DOE and industry with a guide to current energy ...

Base year installed capital costs for BESSs decrease with duration (for direct storage, measured in \$/kWh) whereas system costs (in \$/kW) increase. This inverse behavior is observed for all energy ...

A boom in battery storage has bolstered the demand outlook for lithium in 2026, driving hopes for an accelerated turnaround for an industry ...

Battery storage systems are revolutionizing energy management, yet many operators struggle with profitability. This article explores the financial pitfalls of battery storage projects and actionable ...

You'd think an industry projected to hit \$33 billion globally would be printing money, right? Well, here's the kicker: 65% of grid-scale battery projects completed in 2023 missed their ROI targets by over ...

Lithium battery energy storage loses money

Yet this enthusiasm often overlooks the physical and economic realities of the lithium-ion battery storage technology that is currently in use.
