This funding will advance the development and demonstration of scalable innovative long duration energy storage (LDES) solutions that harness and provide stored renewable energy to the ...

In 2024, California, Massachusetts, and New York became the first states to officially set LDES procurement targets. According to California, which established the first major storage ...

Long-duration energy storage (LDES) will play an increasingly important role in decarbonizing the power sector as more variable renewable energy is added to the electric power grid. LDES is defined by the ...

LDES comprises an array of developing energy storage technologies that aspire to be available at lower costs than alternative technologies and capable of providing diverse services required to keep the ...

LDES systems are large energy storage installations that can store renewable energy until needed and can provide a much-needed solution for a reliable and decarbonized grid.

The Long Duration Energy Storage (LDES) program invests in projects that accelerate the implementation of long duration energy storage solutions to increase the resiliency and reliability ...

After a decade of lithium-ion procurement, the leading clean energy states are finally turning their attention to long duration energy storage. Although ...

The U.S. Department of Energy (DOE) today announced up to \$325 million for 15 projects across 17 states and one tribal nation to accelerate the development of long-duration energy ...

The LDES Demonstrations Program, managed by DOE's Office of Clean Energy Demonstrations (OCED), funds various technology types to overcome technical and institutional ...

Long-duration energy storage (LDES) is a cost-effective option to increase grid reliability and resilience so

Long duration energy storage program

that reliable, affordable electricity is available ...
