-----

This study presents a comprehensive analysis of economic dispatch and optimal power flow in microgrid systems, addressing both single-bus and three-bus grid-tied configurations.

Economic dispatch (ED) is necessary to achieve optimal power allocation while meeting practical physical constraints and ensuring ...

A microgrid is defined as a collection of interconnected loads and distributed energy sources situated within well-defined electrical boundaries, ...

Aiming at the distributed demand of microgrid economic dispatch, in this paper, we propose a fully distributed ADMM algorithm based on the logarithmic barrier function method and virtual agent ...

In contrast, the present work advances long-term techno-economic sizing and dispatch co-optimization of standalone PV-WT-DG-BESS microgrids, where Arctic Puffin Optimization ...

In this paper, we propose a distributed economic dispatch algorithm for MGs providing frequency regulation service, as an example of a dispatch profile with ramp commands.

The distributed optimal dispatch control of grid-connected DC &#181;Gs, taking into account the uncertainty associated with RESs, deserves further investigation in future research.

The development of a real-time economic dispatching algorithm that enhances the operation of microgrids, particularly those ...

This article proposes an economic dispatch strategy for power systems that considers the priority of multiple types of load responses in response to the challenges posed ...
