-----

ETAP Microgrid Control offers an integrated model-driven solution to design, simulate, optimize, test, and control microgrids with inherent capability to fine ...

In this section, a two-stage dispatching framework is proposed for the real-time dispatching of microgrid. In the first stage, distribution of renewable ...

This study evaluated the design and optimization of an islanded hybrid microgrid system with multiple dispatch algorithms. As the penetration of renewable power increases in microgrids, the importance ...

The microgrid design platform Xendee and associated MILP solver are used to identify the cost-optimal conditions for microgrid sizing and dispatch with load control.

The simulated and physical microgrid characteristics are described and the hourly dispatch results for generation, storage and load devices are presented, standing out as a reliable ...

The main technical objective of this project was to demonstrate how foundational technology for microgrid control can be applied in a field environment on a realistic microgrid.

Article Open access Published: 23 February 2026 Sustainable sizing, dispatch, and resilience planning of hybrid microgrids using Arctic Puffin Optimization Ahmed H. Yakout, Amr S. ...

For the multi-objective scheduling problem of smart microgrids, a collaborative optimization framework based on deep reinforcement learning (DRL) and digital twins is proposed to ...
