Space-based solar could power AI more efficiently than on Earth, with full-scale deployment possible in two to three years, Elon Musk said last week in Davos, Switzerland.

Elon Musk is pushing the boundaries of data centre design beyond Earth, outlining a vision in which AI infrastructure operates in orbit and on the Moon. The plan follows SpaceX "s ...

The world's richest man said he wants to put as many as a million satellites into orbit to form vast, solar-powered data centers in space -- a move to allow expanded use of artificial ...

Elon Musk's SpaceX has filed plans with U.S. regulators to launch up to one million satellites into low-Earth orbit. Together, these satellites will act as an orbital data center to power...

Elon Musk's xAI has bought a power plant to power its vast US data centre, raising environmental concerns over AI's growing global energy demands

Space-based data centers - still an early-stage concept - would likely rely on hundreds of solar-powered satellites networked in orbit to handle the enormous computing demands of AI ...

But scientists and industry experts say even Musk -- who outsmarted Detroit to turn Tesla into the world's most valuable automaker -- faces formidable technical, financial and environmental obstacles.

Elon Musk's artificial intelligence startup xAI is moving to pair its massive Colossus data center in Memphis with a relatively modest solar project, an 88-acre field of panels that would sit...

To finance that effort, Musk combined SpaceX with his AI business on Monday and plans a big initial public offering of the combined company. "Space-based AI is obviously the only way to ...

In September, xAI said it would build a 100-megawatt solar farm nearby, which will be paired with 100

Musk Solar Power Generation Base

megawatts of grid-scale batteries to ...
