Power sector investment in solar photovoltaic (PV) technology is projected to exceed USD 500 billion in 2024, surpassing all other generation sources ...

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW of new utility ...

Wind and solar investments in the first half of 2025 fell 18%, to nearly US\$35 billion (prior to the enactment of this act), compared to the same period in 2024. 1

Solar accounted for 58% of all new electricity-generating capacity added to the US grid through the third quarter of 2025, with more than 30 GW installed. Solar and storage, combined, ...

In order to have an estimate of the average power output, the capacity can be multiplied by a suitable capacity factor, which takes into account varying ...

In 2024, between 554 GWdc and 602 GWdc of PV were added globally, bringing the cumulative installed capacity to 2.2 TWdc. China continued to dominate the global market, ...

Lawrence Berkeley National Laboratory compiled and synthesized empirical data on the U.S. utility-scale solar sector.

The past decade was transformative for solar, with rapid cost reductions and subsequent increases in deployment. It is now possible to envision--and chart a path toward--a future where solar provides ...

Find up-to-date statistics and facts on the solar photovoltaic industry in the United States.

Renewable energy statistics 2025 provides datasets on power-generation capacity for 2015-2024, actual power

National investment amount for solar power generation

generation for 2015-2023 and renewable energy balances for over 150 countries and areas for ...
