Two-thirds of all utility scale energy storage capacity installed in 2025 was built in states won by President Donald Trump, including 9 of the top 15 states for new installations.

The U.S. energy storage industry installed a record-breaking 57.6 GWh of new capacity in 2025. It marked the largest single year of new battery capacity additions on record. Despite actions ...

This review offers a quantitative comparison of major ESS technologies mechanical electrical electrochemical thermal and chemical storage systems assessing them for energy density, ...

In 2023, 6.4 GW of new battery storage capacity was added to the U.S. grid, a 70% annual increase. Texas, with an expected 6.4 GW, and ...

The secret often lies in their energy storage ratio system standards. With governments worldwide pushing for renewable energy adoption, understanding these standards has become as ...

In the United States, declining capital costs of renewable energy [2-4] and climate policies such as the Inflation Reduction Act [5], and state-level renewable portfolio standards [6] have been major ...

Over 20 provinces implemented their own mandates, with some increasing their required storage ratios from 10% to as high as 20%. The new plan envisages a more comprehensive and ...

This paper proposes an energy storage configuration method in new energy stations to promote the consumption of new energy. At first, the cost model included th

This report describes development of an effort to assess Battery Energy Storage System (BESS) performance that the U.S. Department of Energy (DOE) Federal Energy Management Program ...
