There have been changes throughout the entire 2023 NEC that may affect the installation of photovoltaic (PV) systems.

Home Policies and Guidelines Policies and Guidelines

Photovoltaic (PV) technologies - more commonly known as solar panels - generate power using devices that absorb energy from sunlight and convert it into electrical energy through semiconducting ...

Solar energy can be harnessed two primary ways: photovoltaics (PVs) are semiconductors that generate electricity directly from sunlight, while solar ...

The new tax law, commonly referred to as the One Big Beautiful Bill Act, rolled back many clean energy tax credits and imposed new restrictions, pressuring early ...

China announced new regulations this year that should result in a more market-oriented approach to renewables deployment.

Over the next 2 years, virtually all new electric generation capacity will be PV, batteries, and wind. 10 GWac of natural gas additions are also projected over that time.

Taken together, these efforts illustrate the Biden Administration's multipronged approach to incentivizing solar energy generation and other renewable energy sources in the United States.

Solar power continues its run as the fastest-growing source of new generation. Developers plan to add 43.4 GW of utility-scale solar in 2026, a 60% increase over the record-setting 27.2 GW ...
