Compare actual realized Utility Energy Consumption (kWh/year) and Cost (\$/year) with Utility Consumption and Cost as estimated using NREL's REopt or SAM computer programs.

Battery cost and performance projections in the 2024 ATB are based on a literature review of 16 sources published in 2022 and 2023, as described by Cole and Karmakar (Cole and Karmakar, 2023). Three ...

Explore our free data and tools for assessing, analyzing, optimizing, and modeling technologies. Search or sort the table below to find a specific data source, model, or tool. For ...

Buyers typically pay a broad range for utility-scale battery storage, driven by system size, chemistry, and project complexity. The price per kWh installed reflects balance of hardware, ...

Table 2 provides a comparison of updated overnight cost estimates for technologies substantially similar to those developed for the 2019 report. To facilitate comparisons, the costs are expressed in 2023 ...

The US National Renewable Energy Laboratory (NREL) has updated its long-term lithium-ion battery energy storage system (BESS) costs ...

DOE's Energy Storage Grand Challenge supports detailed cost and performance analysis for a variety of energy storage technologies to accelerate their ...

In this work we describe the development of cost and performance projections for utility-scale lithium-ion battery systems, with a focus on 4-hour duration systems. The projections are ...

Base year costs for commercial and industrial BESS are based on NREL's bottom-up BESS cost model using the data and methodology of (Ramasamy et al., 2021), who estimated costs for a 600-kW DC ...
