-----

Multiple primary PDP contexts are two or more PDP contexts independent from one another, each of them using one unique PDP address. They give the possibility ...

This system is a powerful, global, cost-effective solution that provides assured communications to military, special forces, law enforcement and government agencies.

Activating a PDP address establishes an association between the current SGSN of mobile device and the GGSN that anchors the PDP address. The record kept by the SGSN and the GGSN regarding ...

The present document provides the description of the Packet Data Convergence Protocol (PDCP). The following documents contain provisions which, through reference in this text, constitute provisions of ...

Developed as a suite of standards for digital communications, Project 25 (P25) is an important component for most public safety and government agency communication.

PDCP provides its services to the RRC and user plane upper layers, e.g. IP at the UE or to the relay at the base station. The following services are provided by PDCP to upper layers: transfer of user plane ...

As users move from one location to another, their connection needs to be seamlessly handed over from one base station to another. PDP handles ...

PDCP stands for Packet Data Convergence Protocol. The 3GPP specification TS 38.323 defines the PDCP protocol. As shown in the figure below, it lies between the RLC layer on the lower side and the ...

eNB (evolved NodeB): This is the base station that manages communication between the UE and the LTE network. The eNB contains the ...
