Strong demand for new energy supply and rising power prices strengthen the market fundamentals for new solar projects in the long term. Overall, our low case is 18% lower than our ...

Wind power has different characteristics, e.g. a higher capacity factor and about four times the 2015 electricity production of solar power. Compared with wind ...

Solar and wind accounted for 91% of new US electrical generating capacity added in the H1 2025, according to data just released by the Federal ...

Prospective utility-scale solar and wind capacity -- projects that have been announced or are in the pre-construction and construction phases -- ...

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find ...

Solar experienced the fastest growth among all power generation technologies in terms of electricity output, three times as much as wind power, which was ranked second.

For solar PV, wind and bioenergy for power, deployment has been revised downwards. Solar PV accounts for over 70% of the absolute reduction, mainly from utility-scale projects, while offshore ...

Data on renewable power capacity represents the maximum net generating capacity of power plants and other installations that use renewable energy sources to produce electricity.

As a result of new solar projects coming on line this year, we forecast that U.S. solar power generation will grow 75% from 163 billion ...

Photovoltaic and wind power generation market capacity

Beyond utility-scale wind and solar, phaseouts are reshaping other technologies. The residential solar 25D credit sunsets after 2025, pushing installers toward ...
