Photothermal power generation is a kind of grid-friendly new energy generation form. Because of its energy storage function, it plays a very good role in transl

Crescent Dunes, the flagship project of Santa Monica-based firm SolarReserve, has achieved what engineers and proponents of renewable ...

Discover how the Crescent Dunes solar project used molten salt for 24/7 power, what went wrong, and how it's shaping the future of solar energy.

Powered by a new thermodynamic cycle: LAVA's liquid-based isothermal technology converts heat into power and power into heat at near-perfect efficiency, delivering superior returns with rapid payback.

The system is analyzed step-by-step, starting with the energy input (in this example solar energy is used as the source of heat) and ending with the expected electrical output.

OverviewDescriptionFossil fuel consumptionEconomic impactPerformanceEnvironmental impactsIn popular cultureExternal linksThe Ivanpah Solar Electric Generating System is a concentrated solar thermal plant located in the Mojave Desert at the base of Clark Mountain in California, across the state line from Primm, Nevada. It was slated to close in 2026, but that decision has been reversed by the California Public Utilities Commission. The facility derives its name from its proximity to Ivanpah, California, which lies within the Mojave National Preserve

As we know, there's an incredible volume of heat and lava under the state's islands" surfaces, and it's this clean, naturally occurring energy that's being harvested to generate renewable ...

New and revolutionary engineering approach to clean energy production is proposed. Scalable energy is produced using copper cylinders and computer science techniques. Energy ...
