The solar system consists of the Sun; the eight official planets, at least three "dwarf planets", 130+ satellites and a large number of small bodies

Mercury is the closest planet to the Sun but, perhaps surprisingly, it does not have the highest temperatures. [Click for even more facts.](#)

A "planet" is a celestial body that (a) is in orbit around the Sun, (b) has sufficient mass for its self-gravity to overcome rigid body forces so that it assumes a hydrostatic equilibrium (nearly round) shape, and ...

[The Planets of the Solar System](#) Detailed information and facts about the eight planets and five dwarf planets in our solar system.

Venus is the second planet from the Sun and the sixth largest. Together with Mercury, they are the only planets without a satellite. [Click for more facts.](#)

A star that hosts planets orbiting around it is called a planetary system, or a stellar system, if more than two stars are present. Our planetary system is called the Solar System, ...

The planets in order from the Sun based on their distance are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. [Click for more.](#)

Earth is the third planet from the Sun and the fifth largest planet in the Solar System with the highest density. [Click for even more facts and information.](#)

[The Nine Planets](#) is an encyclopedic overview with facts and information about mythology and current scientific knowledge of the planets, moons, and other objects in our solar system and beyond.
