Our team works closely with customers to ensure their battery packs meet all required safety and performance standards on the first attempt. From UL and IEC to UN/DOT and beyond, we guide ...

A single cell battery as defined in part III, sub-section 38.3 of the UN Manual of Tests and Criteria is considered a "cell" and must be offered for transportation in accordance with the requirements for cells.

This document provides generalized guidance on the requirements for proper packaging and hazard communication of shipments of lithium cells and batteries and lithium battery-powered equipment by ...

The hazards and controls described below are important in facilities that manufacture lithium-ion batteries, items that include installation of lithium-ion batteries, energy storage facilities, and facilities ...

Although conventional battery chemistries, such as lead acid, pose fire and explosion hazards, the combination of high-energy volatile chemistry packed ...

Production requirements and constantly evolving cell chemistries create worker and equipment safety challenges. It is not only in the production of lithium batteries ...

Lithium battery safety is paramount in both industrial and medical applications. By adhering to key safety standards like IEC 62133, UL 2054, and UN 38.3, companies can mitigate the risks associated with ...

The battery manufacturing industry's strict standards and regulations guarantee safety, performance and durability. Learn more about production, recycling and traceability.

Custom lithium-ion battery packs typically require multiple certifications, including UN38.3 for transport safety, IEC 62133-2 for global compliance, UL certification for US markets, and ...
