Levels of potentially dangerous cosmic radiation in Earth's atmosphere rose to a two-decade high in November after a rare solar super ...

Most of the solar radiation is absorbed by the atmosphere, and much of what reaches the Earth's surface is radiated back into the atmosphere to ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated ...

The Energy Information Administration (EIA) reported that, in 2024, the United States added a record 30 gigawatts (GW) of utility-scale solar to the ...

Europe's energy markets remain volatile three years after prices hit record highs, driven by lingering geopolitical strains and the urgent shift from fossil fuels. Governments and utilities now eye ...

This energy can be used to generate electricity or be stored in batteries or thermal storage. Below, you can find resources and information on the basics of solar radiation, photovoltaic and concentrating ...

Reflection occurs when incoming solar radiation bounces back from an object or surface that it strikes in the atmosphere, on land, or water, and is not transformed into heat.

A constellation of satellites orbiting 250 miles above Earth's surface shows how solar and wind have taken off in recent years: Here's what ...

But this year momentum shifted unmistakably toward the energy that streams from the Sun today. Renewable energy, most of it from sunlight itself or from wind, ultimately driven by the ...

Recent scientific research shows that solar activity, after decades of decline, has reversed course. This article

explains what that means, the science ...
