Calculating Solar Panel, Inverter and Battery Charger Specifications
Estimating Load Wattage
Determining Approximate Solar Panel Dimension
Calculating Battery Ah
Evaluating Charger Controller Specifications
Assessing Inverter Specifications
1) First you will need to estimate how much watts of electricity you may require for the specified load. Let's say you have a 100 watt load that needs to be operated for approximately 10 hours, in that case the total power required could be estimated simply by multiplying the load with hours, as given under $100 \text{ Watts} \times 10 \text{ hours} = 1,000 \text{ Watt hours}$See more on homemade-circuits
