Solar panels, both in residential and in solar power plants, do not kill birds outright. However, it has been observed that some birds are somehow ...

When officials with the National Fish and Wildlife Forensics Laboratory saw one of these endangered birds last year, it was no laughing ...

Vander Zanden and colleagues performed geospatial analyses of stable hydrogen isotope data obtained from feathers of ...

The birds did perch on the panels, and they used the undersides for foraging, nesting and roosting. The issue: Wind and solar power is exported to people in other areas.

Solar farms can impact bird populations through several mechanisms, leading to fatalities or displacement. The "lake effect" occurs when reflective photovoltaic (PV) panels are mistaken for ...

Opened in 2014, the largest solar power plant in the world, Ivanpah Solar Plant, located in the Mojave Desert in California, is believed to be responsible for at least 6,000 bird deaths each ...

To this end, Katzner, Davis, and other biologists are working with the renewable energy industry to create a nationwide ...

A rare and unusual type of solar power plant that concentrates sunlight in California is accidentally killing up to 6,000 birds every year, with staff ...

Solar farms, coming soon to a field near you, are an ecological disaster turning productive land into a nature dead zone. Birds frequently fly into ...

Solar energy production in the United States causes an estimated 37,800 to 138,600 bird deaths annually, a

Solar power dead bird

figure significantly lower than the 14.5 million deaths attributed to fossil fuel power ...
