But scientists and industry experts say even Musk -- who outsmarted Detroit to turn Tesla into the world's most valuable automaker -- faces formidable technical, financial and environmental obstacles.

# Solar power generation and energy storage Musk

As Tesla, Inc. developed batteries for its electric car business, the company also started experimenting with using batteries for energy storage. Starting in 2012, Tesla installed prototype battery packs (later called the Powerpack) at the locations of a few industrial customers. In November 2013, Tesla announced that it would build Giga Nevada, a factory to produce lithium-ion batteries.
