As traditional coal plants grow older, we're seeing a rapid increase in the use of renewable energy sources such as wind and solar power. This shift is ...

Coal may yet hold off wind and solar with a strong five months to close 2024. But renewables are likely to overtake the former king of the power ...

Clean energy has, for the first time, generated more electricity than coal -- but political backlash now threatens the science that made it possible.

Global electricity generation from solar will quadruple by 2030 and help to push coal power into reverse, according to Carbon Brief analysis of data ...

For the first time on record, renewable energy from solar and wind produced more electricity than coal in the first half of 2025. For the first time ...

The falling costs of renewable energy, battery storage, and advanced power electronics have enabled countries to replace coal while maintaining grid stability and reliability.

For the first time, renewable energy has overtaken coal as the primary source of electricity around the world, a new report says, indicating a shift in the ...

The world's wind and solar farms have generated more electricity than coal plants for the first time this year, marking a turning point for the global ...

Detailed data from the first eleven months of 2025 highlights this rapid momentum, with solar output surging by 49.5% and wind generation growing by 37.4% year-on-year. This massive ...

The authors say it's a sign that renewables can keep up the pace with the growing appetite for electricity

Solar power generation replaces coal

worldwide. Worldwide solar and wind power generation has outpaced electricity ...
