The World Bank has published the study Global Photovoltaic Power Potential by Country, which provides an aggregated and harmonized view on solar resource ...

The Global Solar Power Tracker is composed of worldwide facility-level data on utility-scale (1 MW+) solar photovoltaic (PV) and solar thermal facilities, as well ...

Newsletter The International Renewable Energy Agency (IRENA) produces comprehensive, reliable datasets on renewable energy capacity and use worldwide. Renewable energy statistics 2025 ...

The top five countries are China, United States, India, Japan, and Germany, based on solar power generation and installed capacity. Emerging ...

Germany used 4.6% of global solar energy in 2022, making it the fifth biggest national consumer overall. The nation is also the European leader for ...

This ranking tracks the share of electricity generated from renewable sources (hydro, wind, solar, bioenergy and other renewables) as a percentage ...

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find ...

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the ...

Most of the largest solar component manufacturers worldwide are based in China. For instance, photovoltaic company LONGi was the leading ...

Solar power generation share by country

photovoltaics has increased considerably since the year 2010. Cumulative solar PV capacity in the European Union reached over 300 GW in 2024, with industry projections anticipating total capacity more than doubling by 2030, which would take solar power's share in EU electricity generation (9.2% in 2023) over 20%. Outside of the EU, similar growth in solar power is taking place in the United Kingdo...
