Somalia faces a number of challenges in securing energy access for its people; the country suffers from limited infrastructure and unreliable electricity provision, and is dependent on imported fuels.

Hybrid systems combining renewable energy sources, diesel generators, and battery energy storage can stabilize off-grid and grid-connected systems and provide a continuous power ...

With the small and fragmented fossil fuel-based systems, access to reliable and affordable electricity is beyond the reach of majority of the population in Somalia.

The AMP Somalia project is tailored to the unique nature of the energy sector in Somalia, and as such aims to work with this existing ecosystem ...

While variations exist between rural and urban areas, in 2023 the Somali Household Budget survey estimated more than half of the population (61.9 percent) had access to electricity, demonstrating ...

The 2020 - 24 Somalia National Development Plan recognizes the critical role of off-grid solar energy in enabling energy access to households in rural and re-mote parts of the country through solar home ...

Urban areas stand out for using charcoal (60.6 percent) while other residence types rely more often on firewood (55.8 percent for rural households and 94.3 percent for nomadic households) ...

Understanding how households access, use, and pay for energy is essential for developing inclusive energy policies and attracting investment. This national survey was commissioned to address critical ...
