Electricity supply in Syria has improved since the overthrow of its former dictator Bashar Al Assad last December ended nearly 14 years of civil ...

Findings show that Syria's electricity recovery is progressing but uneven. By mid-2025, electricity consumption had increased in 76% of Syrian locations compared to the previous year, signaling ...

The most sizable problem facing Syria's electricity grid is that large sections of its key infrastructure - nearly two-thirds - have either been destroyed ...

In the 2000s, Syria's electric power system struggled to meet the growing demands presented by an increasingly energy-hungry society. Demand grew by roughly 7.5% per year during this decade, fueled by the expansion of Syria's industrial and service sectors, the spread of energy-intensive home appliances, and state policies (i.e. high subsidies and low tariffs) that encouraged wasteful energy practices. Syria's inefficient transmission infrastructure compounded these problems: In 2002, Electricity Minister Munib ...

Partnership or Clientelism? Syria is in urgent need of electricity. Local and regional companies have stepped in to fill the gap, gradually positioning themselves as indispensable ...

The Syria Electricity Emergency Project (SEEP) will rehabilitate damaged transmission lines and transformer substations and provide technical ...

Post-War Syrian Energy Infrastructure faces massive destruction, fuel shortages, and funding gaps, yet limited recovery efforts.

Key indicators to monitor include power plant construction, initiation of proposed projects, electric grid improvements, and government stability. This report uses satellite imagery and open ...
