With the goal of reaching climate neutrality by 2050, the country is implementing measures to achieve a 100 percent renewable ...

Spain's insistence on storage integration as a prerequisite for renewable funding sends a powerful signal to European markets: in a high-renewables future, batteries are no ...

According to data from Red Eléctrica, solar photovoltaic (PV), with a total capacity of 32,043 MW, has surpassed wind power (32,007 MW) to become the technology with the ...

With solar generation jumping 23% last year alone [1], the country's facing a sort of "good problem" - renewable overproduction during peak sunlight hours. But here's the kicker: energy ...

Spain's battery energy storage market is at a critical point. Despite being a leader in renewable energy deployment in Europe, the country has only ...

These figures, according to UNEF, show that the storage business is gaining traction in the Spanish renewable energy market.

Spain breaks records in solar photovoltaic energy. Learn about the data, challenges, and the future of the sector by 2030 in generation, self-consumption, and storage.

The integration of this new renewable capacity, mostly wind and power solar photovoltaic, represented a significant boost to the energy transition and the fulfilment of the integration ...

Spain has established itself as a solar powerhouse in Europe, but a quiet bottleneck threatens the momentum: energy storage. In 2024 ...
