-----

In this project, RLI scientists and project partners are analyzing the potential and demand for heat storage in Berlin. They also determine the resulting space requirements for the status quo up to the ...

TES can be integrated into existing fossil fuel infrastructure, repurposing coal or gas plants into clean energy storage sites. This helps retain steam turbines, grid connections, and local ...

Germany's largest heat accumulator is expected to be commissioned at the start of next year. The heat storage is located on Vattenfall's site at the ...

Swedish public utility Vattenfall will soon start filling a 45m-high, 200MW-rated thermal energy storage facility in Berlin, Germany.

Seasonal heat storage systems help to shift excess heat from summer to times of higher heat demand in winter. There are different types of storage systems for this. The scientists consider ...

An aquifer thermal storage project has been proposed to stabilize energy supply from a heat pump facility in Adlershof in Berlin, Germany.

The results suggest the immediate exploitation of the existing renewable energy potential and seasonal heat storages, as well as a necessity for a major increase in renovation rates. The ...

At TU Berlin, our focus within BEST-Storage is on the development of thermochemical storage, providing a particularly compact and efficient solution for seasonal heat storage. All technologies are ...

In the southeast of Berlin, we will implement a high-temperature Aquifer Thermal Energy Storage (ATES) system. It will be integrated into the existing district heating network of BTB, which is the ...
