Learn about the solar system in astronomy. Get its definition, discover the planets in order, and get interesting facts.

The Solar System provides the only known example of a habitable planet, the only star we can observe close-up, and the only worlds we can visit with space ...

Our planet Earth is part of a solar system that consists of eight planets orbiting a giant, fiery star we call the sun. For thousands of years, ...

With each planet, moon, asteroid, and comet, the solar system tells a story of birth, destruction, rebirth, and motion--stories written in craters, frozen ...

No object in the solar system fascinates observers more than Saturn. Even a small scope shows the system of rings surrounding the planet's pale-yellow globe.

Trans-Neptunian region
The Solar System is the gravitationally bound system of the Sun and the masses that orbit it, most prominently its eight planets, of which Earth is one. The system formed about 4.6 billion years ago when a dense region of a molecular cloud collapsed, creating the Sun and a protoplanetary disc from which the orbiting bodies assembled. Inside the Sun's core hydrogen is fused into helium for billions of years, releasing energy which i...

This digital collage brings together our solar system and points beyond in one view.

How many planets are in the solar system? How did it form in the Milky Way galaxy? Learn facts about the solar system's genesis, plus its ...
