Many people have heard the skepticism that solar photovoltaics (PV) could never work in northern Canada because of the extreme cold, but new ...

Technological advancements have made solar energy systems more efficient and feasible in various climates, including northern regions. These innovations allow for increased energy ...

Between November and January in southern Yukon, when energy use is peaking and hydro reservoirs are dropping, solar panels produce just 3.3 ...

But could solar power offer a green alternative? Store Norske Energi, a state-owned energy company based in Longyearbyen, is testing whether solar energy could ...

China is expanding renewable energy exponentially while the U.S. is going backward. How China became the global leader, why the U.S. falling behind and what it means for these ...

So, how does the North actually produce enough solar power to supply homes across the region? In this article, we're answering that question. Read on to discover how Nordic regions are ...

Yet solar power has been increasingly taking hold above the Arctic Circle, in particular among indigenous communities with some of the strongest ...

Latitude, climate, and weather patterns are major factors that affect insolation --the amount of solar radiation received on a given surface area during a specific amount of time. ...

Solar production varies based on where you are at in the country. In the United States (and the northern hemisphere), south facing panels perform best. The further north you go, the more pronounced this is.
