In 2022, wind turbines were the source of about 10.3% of total U.S. utility-scale electricity generation. Utility scale includes facilities with at least one megawatt (1,000 kilowatts) of electricity ...

Data on renewable power capacity represents the maximum net generating capacity of power plants and other installations that use renewable energy sources to produce electricity.

Annual electricity generation from wind is measured in terawatt-hours (TWh) per year. This includes both onshore and offshore wind sources.

Wind, nuclear, hydro, and solar together account for more than one-third of capacity. 468,582 MW of new generation capacity is under development in the United States, which is comparable to the total ...

The world's installed wind power capacity now meets well over 10% of global electricity demand - and much more than nuclear power. More than 30 countries now have a share of wind ...

Use the slider and interactive maps below to see land-based wind energy capacity by state (with additions from 2023) and percentage ...

A review by the Sun Day Campaign of newly released data from the U.S. Energy Information Administration shows that wind power remained the leading renewable source of ...

Wind power's total cumulative installed electricity generation capacity has increased rapidly since 2000, and continues to expand faster than any other ...

About Wind U.S. Wind Energy Facts* Wind power capacity totals 151 GW, making it the fourth-largest source of electricity generation capacity in the country. Wind is America's largest source of ...
