Solar accounted for 58% of all new electricity-generating capacity added to the US grid through the third quarter of 2025, with more than 30 GW installed. Solar and storage, combined, ...

In 2025, renewable energy sources supplied over a quarter of U.S. electricity, with solar and wind generation exceeding coal and nuclear, marking a major shift in the nation's power grid.

In recent years, solar power generation has seen more rapid growth than wind power in the United States. However, among renewables used for ...

Solar and wind accounted for 91% of new US electrical generating capacity added in the H1 2025, according to data just released by the Federal ...

Each presentation focuses on global and U.S. supply and demand, module and system price, investment trends and business models, and updates ...

The present review study, through a detailed and systematic literature survey, summarizes the world solar energy status along with the published solar energy potential assessment articles for ...

Wind and solar developers often bring their projects on line at the end of the calendar year. So, the new capacity tends to affect generation growth ...

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find ...

A review by the SUN DAY Campaign of data released by the Federal Energy Regulatory Commission (FERC) reveals that the combination of solar ...

Wind power and photovoltaic power generation in each quarter

Once hydropower, geothermal, and biomass are accounted for, nearly a quarter of the nation's grid was powered by renewable electricity in 2023, with ...
